

ALTR + OneTrust

Overview

Why OneTrust + ALTR?

By combining OneTrust with ALTR, organizations can simplify their data governance programs through an integration that automates away the gap between governance policy creation and security enforcement.

Highlights

Know your data

- Discover and classify personal data and understand which privacy regulations are in scope.
- Create policy to restrict access to data based on sensitivity.
- Catalog data, link to policies, and visualize data lineage.

Control your data

- ALTR automatically controls data access based on OneTrust policy.
- Policy can control access to data based on time of day, day of week, access rate, location, and more.
- Critically sensitive data can be tokenized, protecting it in use, in transit, and at rest.

Protect your data

- Automatically detect and respond to policy violations, preventing sensitive data from being seen in the clear.
- Integrate data governance with data security and organizations' SIEM, SOAR, and incident response processes.

Advantages

By combining OneTrust's Data Discovery and Data Governance with automated access control and advanced security from ALTR, organizations can:

Simplify data governance programs — Automation removes the headaches that come with manually configured and maintained access controls, saving teams time and effort while ensuring consistent enforcement.

Unify data governance and security — Through OneTrust and ALTR's integration, governance, risk, and security teams benefit from a unified solution that closes the gap between governance policy creation and enforcement of access controls.

See value immediately — With no code required, no software to install, and no application changes to make, customers can see the value that automated governance enforcement brings to their organization in just minutes.
